Today's agenda

- The Problem
- The Solution
- Benefits to a Practice
- Demo
- Feature Set
- The Future

The Patient Experience is stuck in the 70s

Available only during business hours, long hold times, lost leads, and lost revenue.

Rising costs of hiring and benefits **and tediousness of managing staff persists.**

Inconsistent experience, not personalized.

Manual entry **by patient and the front office into the EMR.**

May I
Capture, Connect, and Convert

Intake + Scheduling

Direct and ambient AI intake from calls and faxes

Captures leads 24/7/365, handles seasonal peaks

CRM enabled personalization

Insurance Pre-Auth

Automated pre-auth via agent integrated payer portals and email

Automatic reconciliation of pre-auth to patient

Faster approvals

Recall + Collections

Automated call/text patient outreach based on last visit

Automated co-ordination with surgery centers

AI agents outreach to complete payment

Convert

Patient Recall + Collections

Automated call/text patient outreach based on last visit

Automated coordination with surgery centers

AI agents outreach to complete payment

Capture

Friction: Front office personnel spend 30% of their time manually capturing patient information and scheduling appointments

AI Comms

AI answers patient calls and text messages, captures demographic and insurance information, negotiates availability and schedules consultation in the EMR/PMS.

AI Object Character Recognition

AI extracts patient demographic and insurance information and schedules consultation in EMR/PMS.

Personalization

All customer conversations, and therefore future intent, is captured in the CRM. This data is used to personalize patient engagement.

THE OPPORTUNITY

Friction: Front office personnel spend 20% of their time manually entering data into payer portals, and emailing or calling payers to verify insurance.

AI submits patient data in payer portals

AI navigates payer portals, enters patient data, and triggers insurance pre-authorization.

AI analyzes emails to reconcile pre-auth

Responses that arrive via email are reconciled, resubmitted, or flagged

Agentic CRM automates pipelines

Inputs, agentic operations, and outputs are defined for each stage in the CRM and is automatically moved to the next stage until complete. .

Capture

Friction: Front desk personnel spend 10% of their time making outbound calls for patient recalls, scheduling surgeries, or billing.

Key learning 1

Automated call/text patient outreach based on last visit

Key learning 2

Automated coordination with surgery centers

Key learning 3

May I
Capture, Connect, Convert

Never miss a high value lead

INCREASE REVENUE $68K/DOCTOR/YEAR

Voice + text AI recovers lost income from preventing missed patient calls & bookings[1]

Reduce overhead, improve efficiency

SAVE $45K/YEAR IN STAFF COSTS

Reduce front-desk workload by ~35% with automated intake & scheduling in EMR via APIs.

Integrations through app UI automate workflows, like insurance pre-auth.

Higher patient satisfaction

HIGHER PATIENT SATISFACTION

Personalized and context aware conversation, based on history.

Available 24/7/365. No sick days, no turnover, — just consistent service.

Agentic CRM qualifies callers on behalf of front desk.

Revenue Cycle

	Intake + Scheduling	Insurance Pre-Auth	Recall and Collections
Today	Manual data entry from calls and faxes Available during business hours only Caller must repeat context at each call	Enter data multiple payer portals or must call/email payors Must reconcile pre-auth to patient at varying intervals Delays & missed approvals	Print out lists and cold outbound patient recalls Manual co-ordination with surgery centers Payment reminders outsourced for share of collections
May I	Direct/ambient AI intake from calls and faxes Available 24/7/365 CRM enabled personalization	Automate pre-auth via agents integrated via APIs, payer portals, and email Automatic reconciliation of pre-auth to patient Faster approvals	Automated call/text patient outreach based on last visit Automated co-ordination with surgery centers AI agents outreach for payment in full.

Benefits to an Individual Practice

INCREASE REVENUE $68K/DOCTOR/YEAR

Recover lost income from missed patient calls & bookings[1]

SAVE $45K ANNUALLY IN STAFF COSTS

Reduce front-desk workload by ~35% with automated intake & scheduling.

HIGHER PATIENT SATISFACTION

Personalized and context aware. Never on hold, available 24/7/365

PEACE OF MIND

No sick days, no turnover, no politics — just consistent service every time.

GET PAID FASTER*

Providers fail to collect 2%–5% of net patient revenue due to inefficient RCM[2]

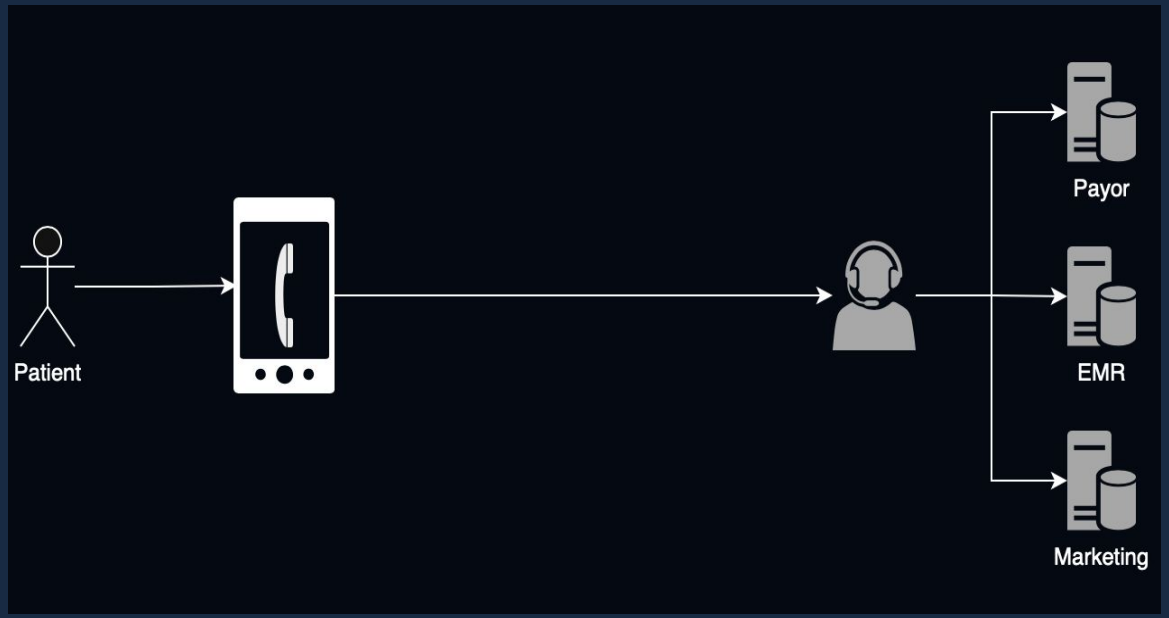
Today



Multiple hired front office staff coordinate workflows between patients, payors, and providers.

They are usually mono-channel interactions (phone)

Most interactions required to keep the business running are routine and repetitive.

Growth in the business requires growth of front office personnel.

Tomorrow

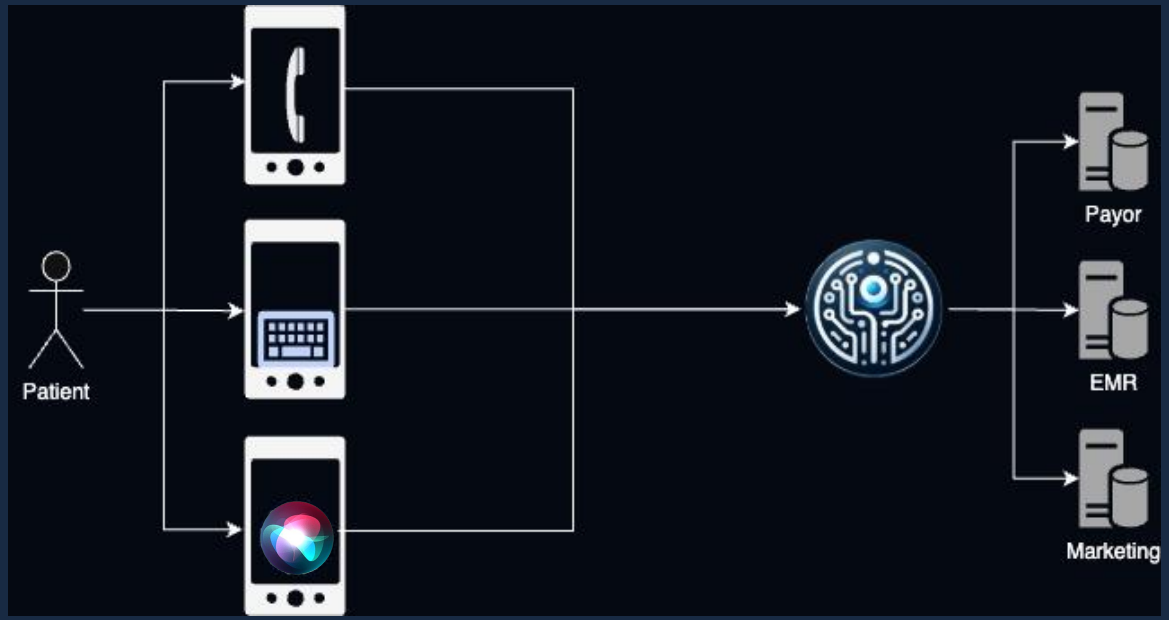
May I coordinates repetitive workflows between patients, payors, and providers.

May I enables multi-channel communications

Conserve the human touch for engaging in-person experiences.

May I enables growth without the overhead at a fraction of the cost.

Future



May I will invest in the foundations for an agentic first future, where agents negotiate with other agents to resolve a task.

May I integrations will have complete context of past patient interactions with the practice.

To create a truly personalized experience May I will negotiate with the patient's personal agent for patient preferences, schedules, and information.

Communications History - Robert Johnson

PHONE CALL — Sept 2, 2025 - 2:15 PM

Incoming Call Transcript:
"Hi, this is Robert Johnson. I received the surgery cost estimate and I'm a bit concerned about the $2,850 out-of-pocket cost. Can someone help me understand what payment options are available? I'm also wondering if there's a way to reduce this cost or if I can set up a payment plan."

Response: Explained payment plan options, Care Credit financing, and confirmed insurance benefits. Scheduled follow-up call with financial counselor.

EMAIL — Aug 28, 2025 - 10:30 AM

Subject: Your Cataract Surgery Cost Estimate

Dear Mr. Johnson,

Thank you for choosing EyeHealth Texas. Based on your insurance verification, your estimated out-of-pocket cost for cataract surgery is $2,850. This includes the surgeon fee, facility fee, and standard monofocal IOL. We offer several payment options including 0% financing through Care Credit. Please call us at (512) 555-0100 to discuss your options.

Best regards,
EyeHealth Texas Financial Team

TEXT MESSAGE — Aug 25, 2025 - 3:45 PM

From EyeHealth Texas:
Hi Robert! Your insurance verification is complete. We'll be sending your cost estimate via email tomorrow. Your surgery is confirmed for Sept 15th at 8:30 AM. Please fast after midnight the night before. Reply STOP to opt out.

Patient Reply:
Thank you! Looking forward to getting this taken care of.

May I

Appendix

May I Differentiation

AI Perf. Engine

May I continuously measures, tests, and optimizes every AI-driven communication flow against the customer's desired outcomes. May I instrumentally tracks where callers disengage, hesitate, or drop off within each step of the conversation. The platform **enables controlled A/B testing of prompts, routing logic, and messaging sequences,** allowing practices to systematically identify what drives higher conversion, appointment completion, and revenue capture.

Patient Intent Graph

May I's intelligence layer continuously models and predicts patient intent across every interaction in the care journey. This is made possible by May I's companion CRM, which captures and unifies patient interactions across all communication modalities. By owning the full conversation history across voice, SMS, chat, web, and follow-up outreach, **PIG analyzes signals such as language, sentiment, urgency, timing, and historical outcomes to infer a patient's readiness to convert**, likelihood to proceed, and need for human escalation, often before that intent is explicitly stated.

Voice as Biometric ID

Voice as biometric identification that can be used as one (of multi) factor of authentication to verify the caller before sharing PHI. **This feature expedites the user into a personalized experience informed by the user's data.** Security requirements will be thoughtfully balanced with customer experience, as May I adopts a prescriptive approach, implementing lighter authentication for routine actions like appointment changes, while enforcing stricter security protocols when handling sensitive medical information.

Agent to Agent Protocol

Customers will have their own agents that call into the business. May I will research and implement an agent to agent protocol that **will detect and route agentic interactions to more secure and efficient protocols** that exchange information and execute functions.

How it will work

- Create new Patient, schedule procedure/appointment.
- Send link to collect payment.
- Secure & Compliant (HIPAA)

AI Improves Billing / Coding Accuracy and Efficiency

Patient: John Doe, 58M
DOB: 02/15/1967
Visit Date: 09/06/2025
Insurance: Blue Cross Blue Shield (BCBS)

S (Subjective):

- Patient with Type 2 Diabetes for 15 years. Reports gradual worsening of vision in both eyes over the past 6 months. Occasional floaters, no flashes.

O (Objective):

- Visual acuity: OD 20/60, OS 20/80
- Intraocular pressure: WNL
- Fundus exam:
  - OD: Moderate non-proliferative diabetic retinopathy, macular edema present.
  - OS: Severe non-proliferative diabetic retinopathy, no neovascularization noted.
- OCT confirms macular edema OD > OS.

A (Assessment):

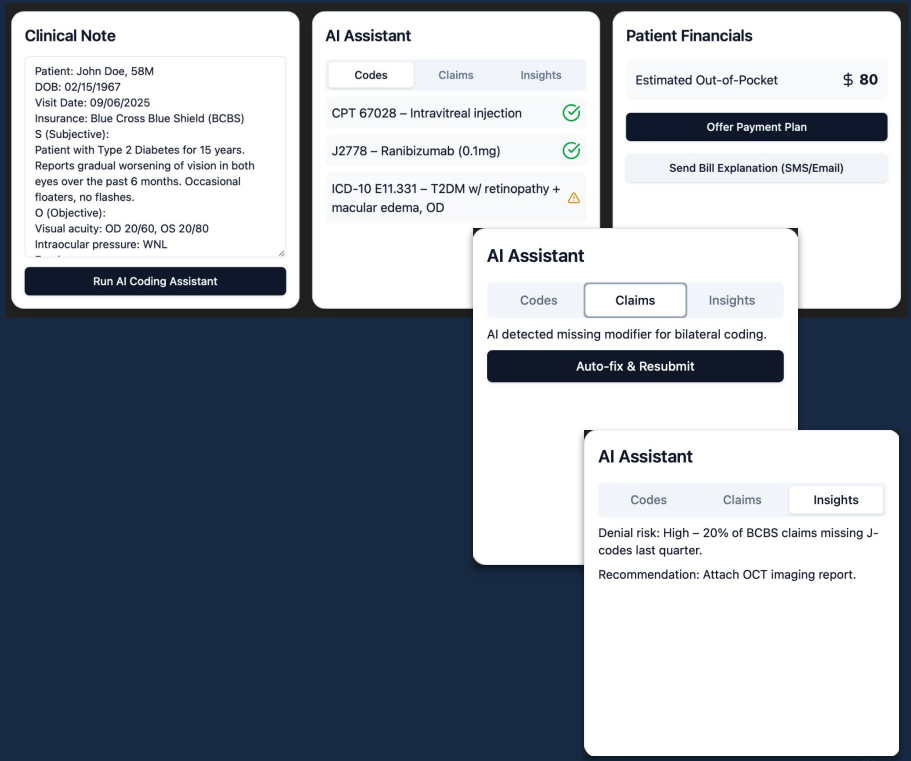
- Diabetic retinopathy (E11.3299 – Type 2 diabetes mellitus with mild nonproliferative retinopathy without macular edema, bilateral).
- Diabetic macular edema OD (E11.331 – Type 2 diabetes mellitus with moderate nonproliferative retinopathy with macular edema, right eye).

P (Plan):

- Recommend intravitreal anti-VEGF injection OD.
- Schedule follow-up in 4 weeks with repeat OCT.
- Encourage strict blood sugar and blood pressure control.
- Communicate findings with patient's PCP/endocrinologist.

Alpha version:

medicalcoding.mayiguide.com



AI Improves Billing / Coding Accuracy and Efficiency

1. Automated Coding Assistance

- **From note:** "intravitreal anti-VEGF injection OD" → AI suggests CPT 67028 (Intravitreal injection of a pharmacologic agent).
- **From diagnoses:** Automatically maps ICD-10 codes:
  - E11.331 (T2DM with moderate nonproliferative retinopathy with macular edema, right eye).
  - E11.339 (T2DM with moderate NPDR without macular edema, left eye).
- AI flags coding completeness: "Both eyes affected, separate ICD-10 codes needed."

2. Eligibility & Coverage Verification

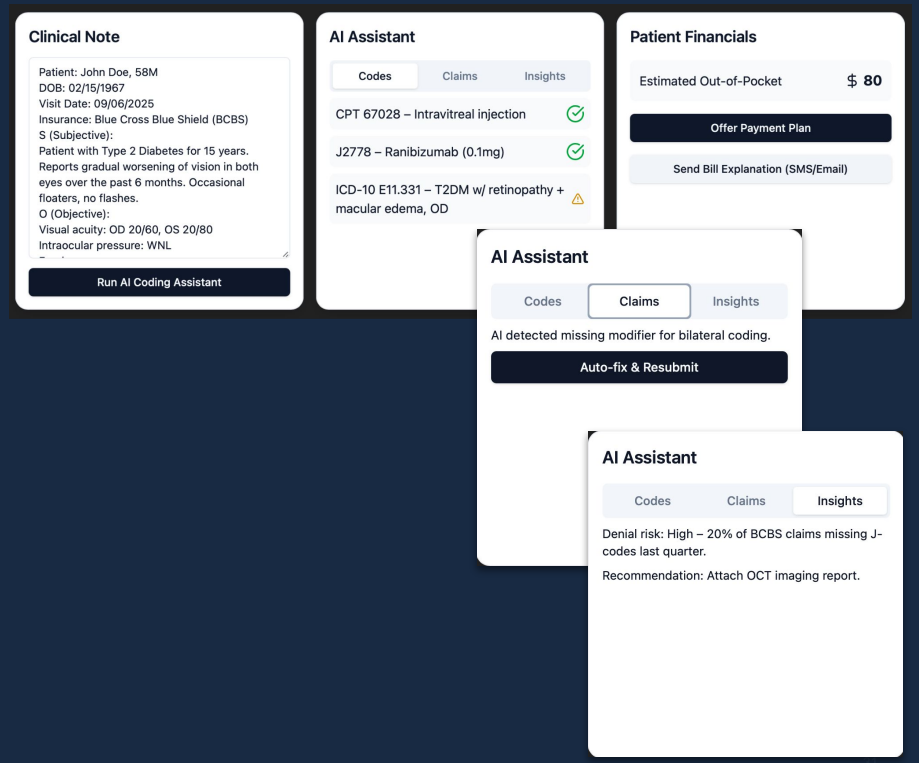
- From patient's insurance (BCBS), AI checks formulary to ensure **anti-VEGF (e.g., ranibizumab)** is covered.
- Runs prior authorization workflow automatically, generating necessary clinical justification from the note.

3. Claims Scrubbing & Denial Prevention

- AI validates modifier usage: Injection (67028) with J-code for the drug (e.g., J2778 – Ranibizumab).
- Flags potential mismatch if only the procedure code is entered without the drug code.
- Ensures documentation supports "medical necessity" (links OCT findings to DME diagnosis).

Alpha version:

medicalcoding.mayiguide.com



AI Improves Billing / Coding Accuracy and Efficiency

4. Revenue Cycle Optimization

- If claim denied, AI drafts appeal letter:
  "Patient with OCT-confirmed macular edema OD. Intravitreal injection performed 9/6/25. Meets BCBS policy LCD for anti-VEGF coverage."
- Prioritizes appeal because intravitreal injections are high-value ($1,500–$2,000+ per treatment).

5. Patient Financial Engagement

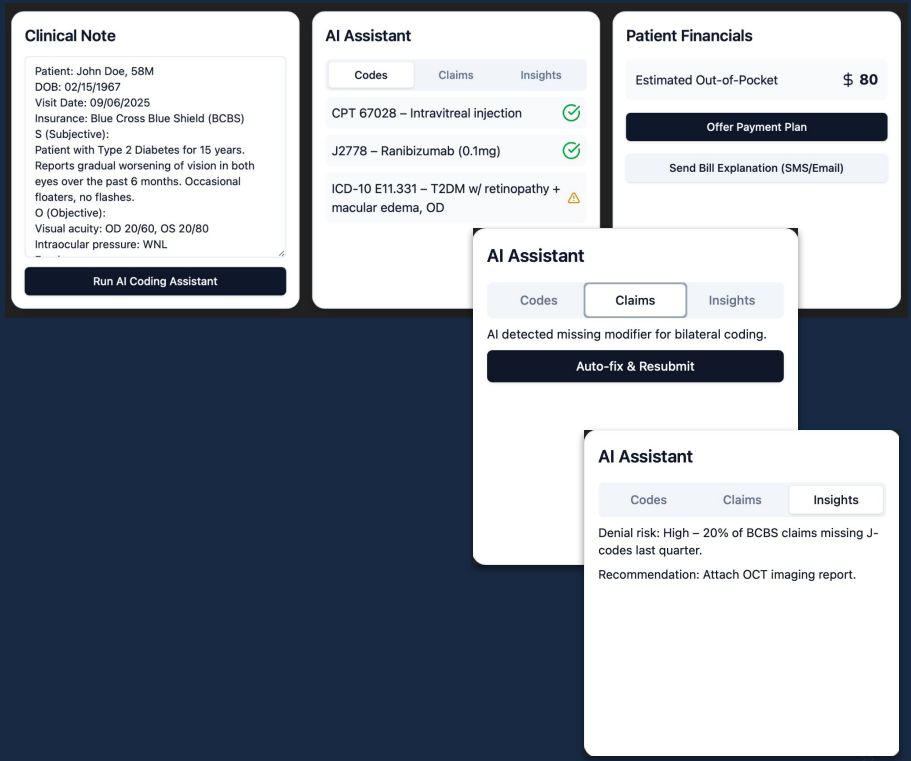
- AI explains in plain English:
  "Your insurance is covering most of the cost of your injection. Your estimated out-of-pocket is $80. Would you like to set up a payment plan?"
- Sends SMS/email reminders for follow-up appointments, reducing no-shows.

6. Analytics & Continuous Learning

- AI tracks denial trends:
  "20% of BCBS denials in the last quarter were due to missing J-codes with injection CPT."
- Automatically updates coding assistant rules for future claims.

Alpha version:

medicalcoding.mayiguide.com



Help Business Save $$

The effort involves analyzing the steps in the persona's current tasks and implementing the necessary integrations and logic to automate them. Automations can be unique to a business, therefore a consulting effort is required. There's a floor to how much overhead we can save a company through AI automation. However, this is a tangible benefit to the business owner and a very real pain-points will be alleviate.

Help Customers Make $$

New and incremental business is valued higher than cost savings. A business will have to engage in top of the funnel marketing, (content creation for social media, SEO, AIEO, paid advertising, etc..), lead generation, lead management, may have existing ingestion channels

May I Roadmap

Today

Features
- PaaS AI platform enabled voice agent
- OCR patient intake
- Integration with ModMed

Oct 2025

Practice Implementations
- AI agent design
- ModMed Integrations
- Launch, Monitoring, and Stabilization

Nov 2025

Features
- Referral patient intake flow
- Insurance pre-authorization

Dec 2025

Practice implementations
- Referral patient intake flow
- Insurance pre-authorization

Jan 2026

Features
- May I native voice + text platform.
- Spanish, Hindi, Chinese.
- Patient verification for outbound communication.

Feb 2026

Practice implementations
- Outbound comms for collections
- Google Maps practice text agent

Future

Features
- Integration with CRM for marketing.
- Integration with other EMRs.
- Medical Billing & Coding AI assistant

Guiding the AI through Retrieval Augmented Generation (RAG)
